Project Factfile

Project name:

Insurers' Engineering, Due Diligence & Technical Advisors

Client:

GCube Insurance (WindPro)

Date:

Ongoing call-off

Value:

n/a

PMSS disciplines:

- Insurers' Engineer
- Due Diligence
- Technical Advisors
- Risk Analysis
- H&S Advice

PMSS provides Technical Advice to GCube/WindPro for their European portfolio of wind energy projects.

Technical appraisal of project construction and operational activities is carried out and a risk based appraisal of findings is developed in conjunction with the client.

Technical capabilities developed from our extensive experience of turbine manufacturers' systems and products together with unrivalled site construction experience, allows risk analysis to be carried out efficiently and issues identified effectively. This in turn accelerates and insures accuracy in our clients' assessment of high exposure risk items.

Major assignments have included in depth appraisals for many high profile developers and operators including RES & ScottishPower Renewables and site based Insurance Engineers duties on various other renewable energy projects.
